

MAGNETIC SPECIALTIES

METERING TRANSFORMER

Potential transformers are a type of metering transformer. Potential transformers are used to step a higher voltage down to a lower voltage suitable for metering and instrumentation. Magnetic Specialties can design a potential transformer for a variety of conditions to meet your accuracy needs.

FEATURES

- Accuracy specifications to meet your needs
- Potential Transformers Up to 95kV BIL
- Single phase and three phase
- Frequency: up to 1 kHz

OPTIONAL

- Primary and/or secondary fusing
- Epoxy encapsulation
- UL Recognized insulation system (Primary must be 600V or less). MSI UL Insulation systems are available in 130°, 180° and 220°C ratings
- CE marking with declaration of conformity. ROHS and Low Voltage Directive when applicable
- Private labeling with customer supplied nameplate. Units that are private labeled cannot carry our UL label
- Final Test Reports with optional Certificate of Compliance

Contact us and we will partner with you to design a solution that works seamlessly in your application.
